## Editorial

Greetings from Roy's Greens & Gardens Foundation, Lucknow and the Journal of The Greens & Gardens.

As a Chief Editor, I am pleased to write editorial for this issue (Vol. 3, No. 5). The popularity of journal amongst the scientists, researchers, teachers have increased significantly during last three years. Wide range of subjects has also been included in the journal in the various issues. We are expecting much more prestigious contributions from research institutes of India and abroad, in the years to come.

In the recent times, several break through technologies in the field of Floriculture and Landscape gardening have developed around the world. These technologies need popularization and large scale use for the advancement of floriculture and landscaping.

Environment of urban areas, particularly in metroplies is a great concern, as the quality of air is detoriating. Therefore, urban greening is a major target. More plantation of trees and other plant species in new forms and patterns are much more required. Participation of all Govt. Institutes, Public Sectors and Industrial houses will fulfill the greening objective.

The constraints in floriculture and landscaping in future would be avaiabaility of new planting material, water scarcity for gardening, space for new plantation together with technical manpower. Mechanization for field work is also required considering dirth of manpower avialbility.

On behalf of the Editorial Board, I wish to express my sincere gratitude to the contributors for submission of research papers for this issue and the support we received from various sources.

Due to some unavoidable circumstances and prevailing pandemic situation throught out the Country and world, the issues of the journal could not be published in time and has been clubbed together. We sincerely regret for that to our readers and members of the journal.

I wish all the readers very fruitful reading of the journal.

Place: Lucknow  
Date: October 30, 2020
